***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-5, 8-12, 15-19 and 22-26 are rejected under 35 U.S.C. 102(b) as being anticipated by Cathey et al (US 5,391,259).

Cathey discloses an emitter array for a display device having a plurality of pixels, at least one emitter in each pixel having substantially a same height (col.7, lines 50-51, col.9, lines 7-9), for example in the range of 1.5 to 1.7 microns (col.7, lines 18-19), a material for each emitter comprising amorphous silicon (col.5, line 24). Since the heights are substantially identical, i.e., and formed by an masking and etching process as in the instant invention, they are expected to inherently have the same result, i.e., a range of sizes, for example within about 0.15 microns and 3.25-9.5% of each other.

***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 3-5, 10-12, 17-19, 24-26 are rejected under 35 U.S.C. 103(a) as being unpatentable over Cathey et al(US 5,391,259).

The discussion of Cathey from above is repeated here. As to the range of sizes cited, for example in claims 3-4, Cathey discloses a range of 0.7-1.75 micron height, whereas the claims cite a more narrow range of 1.5 to about 1.7, and a height of 1.6 microns. It would have been obvious to one with ordinary skill in the height to choose the cited heights from the range disclosed by Cathey in order to vary the yield of the filed emission display device according to the shape and height of the emitter tips.

### ***Response to Arguments***

Applicant's arguments filed 8/21/06 have been fully considered but they are not persuasive. Applicant argues about variability produced by oxidation. In response, the instant invention may also have the same amount of variability if the tips are oxidized as in the prior art taught by Cathey. The claims are not directed in scope to the results of oxidation.

Applicant argues that, at best, Cathey suggests 5% difference in height. In response, Cathey discloses heights (col.7, lines 18-19) that are within the range cited, forming them by masking and etching, and that the heights are identical- thus the same result is expected.

### ***Conclusion***

**THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after

Art Unit: 1765

---

the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
